Keep the working environment clean and tidy. Ensure that eye wash stations are available at the work place. Provide good ventilation. Respiratory protection: In case of brief exposure or low pollution use respiratory filter device. In case of intensive or longer exposure use self-contained respiratory protective device. Use suitable respiratory protective device in case of insufficient ventilation. Hand protection Protective gloves The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation Material of gloves The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The gloves should comply to EN374 Penetration time of glove material The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed. Penetration time > 480 min. Eye/face protection Tightly sealed goggles · Body protection: Chemical resistant protective clothing Antistatic shoes
